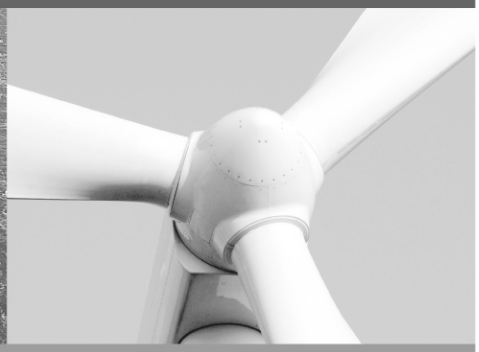
DATA SHEET



Multi-transducer, MTR-4

Measurement input, auto range

- Up to 1000 V AC $_{L-L}$
- Up to 12.5 A (sinusoidal)
- 16 to 400 Hz

Output

- Up to four analogue outputs
- RS-485 Modbus communication

Response time

- ≤ 50 ms (fast analogue output)
- Data refresh time 50 ms

Accuracy, power/U, I

- Analogue output, 0.5/0.4
- Communication, 0.3/0.2

Universal auxiliary power

- 24 to 250 ±20 % V DC
- 48 to 230 ±20 % V AC

Easy programming

- Free utility software M-Set
- By USB, no aux. supply required

Commissioning

- Marine approvals from major classification societies

General information

Application and overview

The MTR-4 is intended for measuring and monitoring single-phase or three-phase electrical power network. The MTR-4 measures RMS values by means of fast sampling of voltage and current signals, which makes the instrument suitable for acquisition of transient events. A built-in microcontroller calculates measurements (voltage, current, frequency, energy, power, power factor, THD phase angles, and so on) from the measured signals.

Features

- Measurements of instantaneous values of more than 50 quantities (V, A, kW, kVA, kvar, kWh, kvarh, PF, Hz, MD thermal, THD, and so on)
- Power accuracy class 0.5 (0.4)
- Serial communication, RS-485 up to 115,200 bit/s optional
- Modbus communication protocol
- Up to four analogue outputs, and two fast analogue outputs
- Single wide auxiliary power supply range 24 to 250 ±20 % V DC, 48 to 230 ±20 % V AC
- Automatic range of nominal current and voltage (max. 12.5 A and 600 V_{L-N})
- Housing for DIN rail mounting
- User-friendly configuration software

Standard compliance

Standard	Description
EN 61010-1	Safety requirements for electrical equipment for measurement, control and laboratory use
EN 60688	Electrical measuring transducers for converting AC electrical variables into analogue and digital signals
EN 61000-6-2	Electromagnetic compatibility (EMC) – Immunity for industrial environments
EN 61000-6-4	Electromagnetic compatibility (EMC) – Emission standard for industrial environments
EN 60 529	Degrees of protection provided by enclosures (IP code)
EN 60 068-2-1/ -2/ -6/ -27/-30	Environmental testing (-1 cold, -2 dry heat, -6 vibration, -27 shock, -30 damp heat)
UL 94	Tests for flammability of plastic materials for parts in devices and appliances

Application

The MTR-4 multi-function transducer is used for measuring and monitoring all single-phase or three-phase values. The range of I/O modules makes MTR-4 a perfect choice for numerous applications. MTR-4 supports standard serial communication RS-485 with speed up to 115,200 baud, which is perfect for simple applications and serial bus interfacing.

Additional USB 2.0 interface can be used for a fast setup without need for auxiliary power supply. This interface is NOT galvanically separated from power input and can be used ONLY unconnected to power inputs.

Programming

The MTR-4 multi-function transducer is completely programmable by M-Set utility software.

Primary-secondary ratio (U, I), energy counter, input and output values are all programmed by setting software on the USB or the RS-485 communication.

It is possible to choose between several standard output value ranges (100 to 0 to 100 %):

-10 to 0 to 10 V,
-1 to 0 to 1 V,
-20 to 0 to 20 mA,
10 to 0 to 10 mA,
5 to 0 to 5 mA,
1 to 0 to 1 mA,.

Within these six ranges, it is possible to set any linear or bent (with maximum 5 break points) output characteristic.
